Writer

Protector

Signer

- **Stand Alone and Computer Interface**
- **For Continuous Form and Single Sheet Checks**
- **Multi-Currency Capability**

The Certex Model 3200 is the most comprehensive checkwriting solution available today. It combines the features of a stand alone checkwriter and a computer interface checkprotector in one unit.
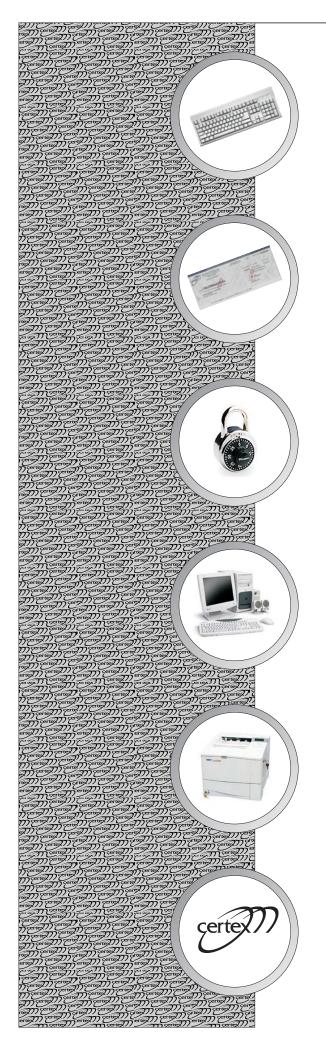

Control the checkwriting function of your business by controlling your accounts payable or payroll program. The Model 3200 protects your check - the key to your bank account.

Productivity will increase when you use Certex products to print, protect, and sign your checks in one operation.

Security of the signatures is controlled by keylock and passwords. The manager assigns operator passwords with dollar limits on amounts and signatures.

Flexibility is built into the Model 3200. The unit may be programmed on site with the keypad or keyboard to accommodate your particular system requirements.

Stand Alone
Simply connect the Model 3200 to your favorite matrix or laser printer to begin issuing checks that are professional and secure. The optional keyboard allows you to add full payee information to your checks.

Computer Interface
Connect the unit between your computer and printer to have your checks signed and protected as they are being printed.

Flexible
Using the keypad or optional keyboard and the display, an executive may set up the unit for several different check formats. Digitized signatures are stored in an internal EPROM.

Forms
Using a laser printer with MICR toner, the 3200 can be used to create the entire document - including the MICR line - from unprinted safety paper.

Security
Protected amount numerals help prevent alteration and give a more professional appearance to the check. Executive and operator passwords provide controlled access. A non-resettable counter records all use.

In the stand-alone mode, the 3200 will record and report check amount, date, check number, payee (if applicable), and operator information. Reporting will also provide count and dollar totals.

Connectivity
The 3200 can connect to a host computer via serial (150 to 38400 baud) DB-25 connection or by way of a parallel Centronics connection.

Time Savings
Printing, protecting, and signing your checks all in one operation without changing your system, equipment, or program will produce a dramatic time savings for your check creation.

Compatibility
Just about any off-the-shelf printer will work with the 3200. Printer requirements: The ability to print graphics and the ability to accept at least one of the 3200's eight industry-common emulations.
