# Heavy Duty Coin Counters

## Ease of Use

Our S-45 Series Portable Coin Counters have simple adjustments for setting the coin's diameter and thickness. These counters offer greater flexibility than other coin counters and can count a wide variety of coins including tokens and foreign coins.

## Electric & Manual Operation

The S-15, S-25 and S-40 models provide manual operation only and offer an economical choice for portable or stationary applications. The S-35 and S-45 models operate in both manual and electric modes enabling the user to count coins efficiently in any environment.

## High Speed

Our counters are capable of processing coins at speeds up to 1,500 coins per minute yet are quieter than many other coin counters.

## Coin Sorting

The S-40 and S-45 models feature an offsort function to count and optionally bag or package the largest coin and separate the smaller coins into a second bag or tray. This feature can also be used to separate foreign coins or tokens from your coins.

## Exceptional Durability

These heavy duty coin counters use a robust mechanical counting system unlike the electronic counting system found in most other coin counters. This provides a more durable and reliable system which will provide years of use even in the most demanding environments.

## Portable Applications

These coin counters are designed to be used in both stationary and portable applications. They include a carrying handle and a dual purpose cover which when open acts as a coin inspection and feeding tray and when closed protects the counter while it is being stored or transported.

## Packaging/Wrapping

Optional packaging tubes are available for US, Canadian, Euro and many other coins.

## Semacon Quality Promise

All Semacon machines are extensively tested and burned in under rigorous conditions in our US facility, assuring the highest possible quality and reliability.
